

## MASTERBATCHES

TECNAN offers a wide range of pre-concentrates or masterbatches with loads between 25% and 60% in weight of nanoparticles incorporated into different polymeric matrices according to the client's requirements. Some of the matrices availables are:

- Polyethylene (High and low density)
- Polypropylene
- EVA
- Rubber

Regarding characteristics and prices of other masterbatches, TECNAN is always available for its clients in order to provide them with a customised product suitable to fulfil their requirements. Contact us:
